

STANDARD OPERATING PROCEDURE for STORAGE OF FLAMMABLE MATERIAL.

Use personnel protective equipment's such as Safety helmet, safety shoes, cotton gloves.

1. Storage location

- **Use designated Location:** Store flammable liquids in an approved flammable liquid storage location/cabinet with self-closing doors.
- **Do not store on the floor:** Keep containers off the floor to prevent spills and damage. Do not block exits, aisles, or emergency equipment.
- **Segregate incompatible materials:** Store flammable materials such as paints, thinners, and techtyle separately and away from oxidizing agents or ignition sources. LPG cylinders must be stored in a dedicated, well-ventilated area, isolated from all flammable liquids as mentioned above to prevent any hazardous reactions or fire risks,

A. Containers and equipment

- **Use approved containers:** Store flammable liquids in approved safety cans or Department of Transportation (DOT) approved containers. Use secondary containment, such as a tray or bin, for added spill protection.
- **Label clearly:** All containers must be clearly labeled with the contents and associated hazards. If a flammable chemical is transferred, the new container must be labeled with the same information.

B. Storage environment

- **Control ignition sources:** Eliminate all ignition sources from storage areas, including open flames, smoking, pilot lights, sparks, and static electricity. Clearly post "No Open Flames" signs.
- **Control temperature:** Store materials in a cool, dry, and well-ventilated area, away from direct sunlight and heat.

C. Static electricity control

- **Bond and ground during transfer:** When transferring flammable liquids between metal containers, electrically interconnect (bond) the containers to equalize electrical potential. Grounding is necessary to dissipate static charges to the earth.
- **Transfer safely:** Transfer liquids slowly to minimize the generation of static electricity. Use a grounded nozzle extension when filling non-conductive containers.

2. Emergency procedures

A. Spills

- **Minor spills:** For small, contained spills, use spill kit. Use non-sparking tools for cleanup.
- **Major spills:** Immediately evacuate the area, notify personnel, and call emergency services. Do not attempt to clean up large or hazardous spills.

B. Fire

- **Call emergency services:** Use fire extinguisher/hose reel/sand buckets to stop fire and call emergency security, safety and section in charge.
- **Use the correct extinguisher:** If trained and the fire is small, use a Class B or ABC fire extinguisher

C. Exposure

- **Inhalation:** Move the affected person to fresh air and seek medical attention.
- **Skin or eye contact:** Flush the affected area with water for 15 minutes, remove contaminated clothing, and seek medical attention.

7. Waste disposal

- **Follow regulations:** Do not dispose of flammable waste by pouring it down the drain or putting it in regular trash.
- **Label waste:** Collect flammable chemical waste in properly labelled, compatible, and sealed containers.
