

STANDARD OPERATING PROCEDURE FOR OUTSIDE TRANSPORT VEHICLE ENTRY AT GATE

- Ensure that all outside transport vehicles are parked in the designated waiting area before entry permission is granted.
- Verify the **gate entry pass, driver's license, vehicle RC, insurance, and pollution certificate** at the security gate.
- Confirm **delivery challan or purchase order** details with the authorized department before allowing entry and if any MTRL
- Conduct a **visual inspection** of the vehicle for leakages, damages and loose items that may cause hazards inside premises.
- The **driver and helpers must wear proper PPE** (helmet, safety shoes) before entering and issued.
- Ensure **vehicle fitness and load securing** by PIL — no overloading or protruding materials are permitted.
- Provide a **temporary visitor/vehicle pass** mentioning date, time, vehicle number, driver details, and purpose of entry and if any material load in truck.

Security personnel must guide the vehicle safely to unloading/loading areas with the help of a signal man if required.

- Only **authorized routes and parking areas** should be used within the premises as per the traffic management plan.
- Maintain **speed limits (10 km/h)** inside the plant and obey all internal traffic signs.
- Ensure **no unauthorized passengers** accompany the driver inside the premises.
- **Vehicle engines must be switched off** during loading/unloading operations.
- Before exit, ensure **material reconciliation and gate pass verification** by concerned department in the Dispatch and HR
- Security should record **exit time, vehicle number, and signature** in the gate register.
- Any **violation of safety or entry procedure** should be reported to the Safety Department.
